

MATERIAL HANDLING

We have completed **considerable material handling** work for our major clients over the years and continue to do so on an ongoing basis. In addition to the **material handling equipment**, we also complete the structural concrete and structural steel as required for the type of project to be completed. We will **self-perform** the majority of your project, eliminating the need for numerous subcontractors.

Robinson Construction has a great deal of experience with the installation, relocation, and modification of many types of material handling equipment in factories, warehouses, process plants, mines, etc. We have the ability to install your equipment, as well as any associated support systems. Examples of the material handling equipment we have installed include:

- Vibratory, Belt, Screw & Drag Conveyors
- Bucket Elevators
- Loadout Equipment
- Vibratory, Volumetric & Weigh Feeders
- Hoppers
- Storage Bins & Silos
- Vibratory Screens
- Mills
- Pneumatic Conveyance Systems
- Baghouses
- Dryers & Blowers
- Cyclones & Separators
- Truck & Rail Scales
- Magnets
- Packaging Lines
- Stackers, Palletizers & Unloaders
- Stretch Wrappers

Some of the materials that have been conveyed, using the aforementioned material handling equipment include cement, clay, dust, stone, grain and finished products.

We have the know-how and experience to complete your material handling project to your complete satisfaction. We are happy to provide references upon request.

"I just wanted to say that the Grain Handling portion of the project, as far as I'm concerned, was the smoothest running operation on the project. Robinson Construction made my job very easy. It was a pleasure working with Robinson Construction and I would recommend them for future work with Kiewit or any other contractor, because they would be an asset to any project."

Kiewit Energy Company, Aventine Grain Handling Project - Mt. Vernon, Indiana
