

STRUCTURAL STEEL

Robinson Construction personnel have **installed major quantities** of structural steel for numerous types of projects including new work, additions, alterations, and reconstruction. Our **trained steel erectors** and **certified welders** have the know how and experience to install the structural steel on your next project.

Structural steel is the framework for virtually every industrial type building. In addition to the building frame, industrial buildings require structural steel for pipe racks, equipment supports, and mezzanines, among other things.

Robinson's structural engineers have the experience required to design the structural steel for your new facility, as well as additions, modifications, or repairs to an existing facility. Our experienced field crews will then erect the steel, using our company owned boom trucks, truck cranes, welding machines, and air tools.

Because we can self-perform the majority of the project, from design to erection of the steel, we have complete control over quality and schedule. Your project can be completed on a compressed schedule, allowing you to begin production quickly.

We are experienced in erection of the following types of steel structures:

- Industrial Buildings
- Industrial Equipment Support Structures
- Mezzanines
- Maintenance Access Platforms
- Roof-top Equipment Support and Access
- Overhead and Jib Crane Supports
- Material Handling Loadout Spout Support
- Elevator Towers
- Conveyor Towers, Bridges, Bents, and Hangar Supports
- Storage Hoppers
- Pipe Racks and Bridges
- Large Duct Supports
- Equipment Stack Supports
- Fall Protection Supports
- Catwalks
- Ladders
- Stairs & Rails
- Guardrails
- Column Protection

"Robinson Construction supplied excellent support members, subcontractors, and field supervision in order to achieve a very tight completion schedule on time and according to BioKyowa time restrictions. BioKyowa, Inc. does not hesitate to recommend Robinson Construction Company as a very responsible and reliable source in supplying industrial construction project needs."

BioKyowa, Inc. - Cape Girardeau, Missouri
