

Water Treatment Plants

Robinson Construction has constructed many water treatment plants, both public and private. We can assist you in **evaluation, design, and construction** of your water treatment systems. Our experience ranges from working with **small municipalities** to **large cities** and from construction of new facilities to major or minor renovations of existing systems.

Crist Engineers, Inc.

New WTP - Batesville, AR

"[The superintendent] provided excellent attention to detail. Jobsite cleanliness was impressive. I hope to work with you in the future."

**Pocahontas Water & Sewer
Commission**

New WTP - Pocahontas, AR

"We are very pleased with our completed project. It was a pleasure working with the Project Manager and Project Superintendent."

As a general contractor who self-performs the majority of a project's construction activities, we have the skills and experience needed to complete the construction of your treatment plant on-time and within your established budget. We will work closely with you to make the construction process as effortless as possible.

Many of the plants we've constructed have been concrete, giving us a great deal of experience in forming and placing concrete both economically and to the highest quality standards. We also have experience with packaged systems. Should steel piping be specified, we can detail and fabricate the piping in our certified welding shop.

Because we self-perform the excavation, concrete work, piping, equipment placement, and site work, we are able to establish the schedule and control the project's momentum. Our superintendents are familiar with the systems generally in use, ensuring proper installation.

Our history of working with engineers, manufacturers, and suppliers, on dozens of past water treatment plants gives us the experience needed to ensure the success of your project. Let us prove to you that Robinson truly does "deliver experience."
