

# WASTEWATER TREATMENT PLANTS

Robinson Construction has **built or upgraded** numerous wastewater treatment facilities. Our project managers and field superintendents have **extensive experience** and knowledge of this type of construction. Wastewater treatment plant construction is not easy - put the **experience and dedication** of our team to work to ensure the success of your next treatment plant project.

As a general contractor who self-performs the civil, structural, and mechanical work on the majority of our projects, we are better able to control the schedule and momentum of the project. Bringing your new plant or expansion on-line within the established schedule will be our greatest priority.

Our in-depth experience with deep excavation and sheet piling gives our crews the knowledge necessary to construct major expansions on even the most restricted sites. The protection of existing structures and utilities and ensuring uninterrupted operation of the existing plant is critical to the success of the project. Our team has the experience to address and resolve these critical issues head-on.

Once the excavations are secured, our experienced crews are ready to demonstrate their superior skills in concrete forming and placement. Our ability to select the proper

forming and placement techniques ensures that your quality and schedule expectations are met.

We are very knowledgeable of the various wastewater treatment processes and equipment available. Our staff has long-standing relationships with major equipment suppliers and top electrical subcontractors. We understand the importance of a quality installation and bringing the new equipment on-line in coordination with the operation of the existing facility.

Your operating staff will receive a clear and concise operation and maintenance manual prepared by our team, ensuring that they have the necessary knowledge and resources to protect your investment.

*"After a notice to proceed was issued, Robinson did an excellent job commanding the construction of this project and became an integral team player. Robinson substantially completed the project ahead of schedule and this facility has been 100% of the time in compliance with regulatory discharge requirements since start-up."*
